| linkedin.com/in/abdullah-muhammad

IBM Certified · Mobile App Developer · AI Developer · Full Stack Developer

PROFESSIONAL SUMMARY

Results-driven **Software and Mobile Application Developer** with demonstrated expertise in architecting cross-platform mobile applications, full-stack web solutions, and scalable backend services. Proficient in **Flutter**, **React.js**, and **Python/Flask**, with strong command of real-time database technologies and cloud-native development via Firebase. Holder of three **IBM Professional Certificates** (39 courses) spanning Mobile App Development, AI Development, and Full Stack Software Development. Experienced in leveraging AI-assisted workflows to accelerate development cycles, improve code quality, and deliver documentation-first solutions.

TECHNICAL SKILLS

Mobile Dev	Flutter, Dart, React Native, Expo, Android Studio	AI & Tools	Generative AI, Prompt Engineering, AI Debugging
Web Dev	React.js, JavaScript, HTML5, CSS3, Bootstrap	Email	Google SMTP with Flask
Backend	Python, Flask	Version Control	Git, GitHub, VS Code, Anaconda
DB & Cloud	Firebase (Realtime / Firestore), SQL, NoSQL	Documentation	LaTeX, Overleaf, Technical Report Writing

CORE COMPETENCIES

- ▶ Cross-platform mobile & web development
- ▶ RESTful API design & backend architecture
- ▶ Real-time database & cloud integration
- ▶ AI-assisted development & prompt engineering
- ▶ Full SDLC proficiency
- ▶ GitHub project & version management
- ▶ Technical documentation
- ▶ Continuous self-directed learning

EDUCATION

**Bachelor of Science
in Computer Science**
Specialization: Software Technology
Completed

CERTIFICATIONS

- IBM iOS & Android
Mobile App Developer**
Coursera / IBM Skills Network
February 2026
- ▶ 14 courses: Flutter, Dart, React Native, Swift, Git/GitHub, mobile UI/UX, notifications, databases, capstone app.
- IBM AI Developer
Professional Certificate**
Coursera / IBM Skills Network
January 2026
- ▶ 10 courses: AI fundamentals, generative AI, prompt engineering, Python, Flask, AI-powered applications.
- IBM Full Stack
Software Developer**
Coursera / IBM Skills Network
June 2025
- ▶ 15 courses: React, Node.js, Express, Django, Flask, SQL/NoSQL, Docker, Kubernetes, microservices, cloud security.

KEY PROJECTS

SmartFixOman — Household Service Management for Chat and Bidding *Lead Developer/Project*

Design and Implementation

Stack: Flutter, Dart, Flask, Python, Firebase, GitHub

- ▶ Engineered a full-featured mobile platform connecting customers with service providers via an intuitive Flutter/Dart interface.
- ▶ Architected RESTful backend services in Flask/Python with service-request handling and automated notification pipelines.
- ▶ Integrated Firebase Realtime Database for live, bidirectional data synchronisation across user roles.
- ▶ Maintained codebase integrity via structured Git branching and GitHub version control.

E-Scooter Rental System for Sultan Qaboos University Campus

Diploma Project

Stack: HTML, CSS, Bootstrap, Firebase Database

- ▶ Designed a sustainable web-based E-Scooter Rental System to support eco-friendly transportation within Sultan Qaboos University campus.
- ▶ Developed a static responsive website using HTML, CSS, and Bootstrap to provide a clean and user-friendly rental experience.
- ▶ Integrated Firebase Database to manage user information, scooter availability, rental records, and system data.
- ▶ Applied the Rapid Application Development methodology with iterative feedback to improve website functionality and usability.
- ▶ Conducted questionnaire-based data collection from SQU students and faculty to identify campus transportation needs and user preferences.
- ▶ Proposed core features including user management, real-time scooter availability, rental tracking, payment process planning, and maintenance management.

Automated Email Notification Engine

Backend Service

Stack: Python, Flask, Google SMTP

- ▶ Developed a robust, event-driven email service automating transactional and status-update communications.
- ▶ Designed modular, reusable handlers to streamline integration across multiple application workflows.

WeatherApp — Native Android Application

Android Mini-Project

Stack: Android Studio, Java, Firebase

- ▶ Built a native Android weather app with a clean interface for real-time meteorological data display.
- ▶ Leveraged Firebase for persistent data storage, preference caching, and seamless state retrieval.

Food Ordering System — Full-Stack Web App

Personal Project

Stack: HTML5, CSS3, Bootstrap, Flask, Python

- ▶ Designed a fully responsive multi-page frontend using HTML5, CSS3, and Bootstrap.
- ▶ Implemented end-to-end ordering logic and dynamic routing via a Flask/Python backend.

MeditationApp & FlowerShop Website

Coursera Capstones

Stack: React.js, Expo

- ▶ Built component-based, mobile-optimised UIs using React.js and Expo with modern state-management patterns.
- ▶ Applied reusable component design reinforcing best practices in modular web architecture.

EXPERIENCE

Remote Intern

June 2026 – Present

Qwetrum Technologies

100% Remote | Unpaid

www.qwetrumtechnologies.tech

- ▶ Accepted a competitive internship offer to gain hands-on, real-world project experience under professional mentorship in the digital solutions domain.
- ▶ Contributing to meaningful digital experience projects as part of a dedicated, innovation-driven remote team.

- ▶ Developing professional competencies in collaborative software workflows, client-facing deliverables, and agile project execution.

Independent Software Developer

Self-Directed | Ongoing

Self-Initiated Project Development & Continuous Learning

- ▶ Conceptualised and delivered production-grade mobile and web applications using Flutter, Android Studio, React.js, Expo, Flask, and Python.
- ▶ Applied AI-assisted tools to optimise code quality, accelerate debugging, and enhance UI/UX outcomes.
- ▶ Implemented real-time Firebase database architectures for live, multi-user application features.
- ▶ Integrated Google SMTP within Flask backends for automated, event-driven user communication.
- ▶ Managed all source code, branching strategies, and release workflows through GitHub.
- ▶ Authored technical documentation and project reports using L^AT_EX and Overleaf.
